Project Name: Stock Price Prediction

Group Members:

Praneeth Sai Ummadisetty, Arjun Suresh, Phineas Howell

Preferred Communication Methods:

Whatsapp, Zoom calls, GitHub (file sharing)

Check-in Frequency:
After creating a plan for the project and splitting the project into smaller tasks, check-ins after every checkpoint would be ideal.

Check-in Tasks:

Preferably have at least one other person test the code from the updated GitHub branch from the check-in. This way it can ensure that the code is not just running locally on one person's computer but runs even after being uploaded to GitHub.

To Do List Storage Strategy:

Will create a trello for this project and track the progress and important updates.

Meeting the Deadline Strategy:

Just start work early since we will definitely need the initial parts to be completed, working, and tested before proceeding to the later stages of the project. So, staying on track of things and being accountable while also holding each other accountable is key.

Also try and ensure we have tested everything well in advance and not too close to the deadline. This will allow us to test for any edge cases we might have missed out on.

Missed Deadline Recovery Strategy:

There might be moments where someone is unable to meet a certain deadline we have set for our checkpoints, which is fine. If they are unable to meet the deadline and know in advance, they can just request another group member to switch tasks with them, but should let each other know early. In case this is an emergency, we can try and fill in for each other's parts to ensure smooth progress of the project. Ultimately, it is our project and the goal is to make sure it works well. Keeping that in mind and making sure everyone contributes equally are essential.

Project Deliverable Submission Process:

Anyone can submit it. It depends on who has the last task to complete or who is available at the time to submit. But the other group members should just double check and make sure all the files have been correctly submitted and that it also shows up for them since only one person needs to submit.

Instructor Support Expectations:

Ideally, we would like to work on this project ourselves and ensure we are able to handle any challenges we are faced with. But in case we are stuck and have been stuck for a while, then it would be beneficial if the instructor could give us hints to get past the hurdles.
